wastepaper

# check wastepaper

Diseñado con líneas sintetizadas y nítidas, muestra una clara vocación de convivencia e integración con la arquitectura de su entorno, sin pretensiones de destacar, convirtiéndose en un elemento más dentro del equipamiento donde se ubique.

Designed with synthesized and clear lines, it shows a clear vocation of coexistence and integration with the architecture of its surroundings, without pretending to stand out, becoming one more element within the equipment where it is located

# check

## DOS SISTEMAS PARA LA OPTIMIZACIÓN DE LA RECOGIDA | TWO SYSTEMS FOR THE OPTIMIZATION OF THE COLLECTION

### DETECTOR ÓPTICO

La papelera Check cuenta con un dispositivo DOP80, medidor de distancias óptico que permite conocer el porcentaje de llenado de la papelera. La información se recoge mediante un microprocesador que envía los datos a una página web informando sobre el momento de la recogida o si todavía hay capacidad suficiente. Con esta información, se podrá realizar una previsión de recogida ya que con los datos se conocerá qué ubicaciones tardarán más en llenarse y cada cuánto tiempo.

### SENSORES DE PESO

En la base de la papelera hay instalados 3 sensores modelo SP06 que recogen el peso total de su contenido. Esta información es muy útil para la gestión del tipo de residuo.

### OPTICAL DETECTOR

Check has a DOP80 device, optical distance meter that allows to know the percentage of filling the bin. The information is collected by a microprocessor that sends the data to a web page notifying the time of collection or if there is still enough capacity. With this information, it will be possible to make a collection forecast thanks to the data that allows to know which locations will take longer to fill and at each time.

### WEIGHT SENSORS

At the base of the bin there are 3 sensors installed Model SP06 that collect the total weight of the content. This information is very useful for waste residue management

## SEGURIDAD TECNOLÓGICA | TECHNOLOGIC SECURITY

### SENSOR DE TEMPERATURA

El sistema cuenta con un termómetro que permite monitorizar la temperatura en la papelera, la alarma se activa cuando supera los límites máximos aceptables lo que sugiere una situación de riesgo o un posible incendio.

### SENSORES DE PESO - MODEL ST9001

Sistema con control de introducción de objetos pesados en el interior de la papelera. El sensor de fuerza recoge el peso y según el incremento instantáneo (configurable) avisa al software central si hay sospecha de que podría ser algún tipo de explosivo.

### TEMPERATURE SENSOR

The system has a thermometer that allows it to monitor the temperature inside the bin, the alarm is activated when it exceeds the maximum acceptable limits which can indicate a situation of risk or a possible fire.

### WEIGHT SENSORS - MODEL ST9001

A system which detects the introduction of heavy objects inside the wastepaper. The weight sensor works when there are instant increments (this is programmable) warns to the central software if there is a suspicion that it could be some kind of explosive.
